Fertility (Vasectomy, Tubal Ligation)

Vasectomy (office procedure)
Tubal Ligation

Wound Care

Diabetic Ulcers
Venous and Arterial Ulcers
Chronic Wounds

Referrals

Pre Surgery Clearance

Occasionally medical or cardiac clearance will be necessary prior to scheduling surgery. Depending on your preference, you can provide the medical clearance or we can schedule the medical clearance with a cardiologist.

Urgent Surgical Consults: If you have an urgent surgical consult that needs to be seen immediately, please call our office at 765.521.1217. Ask for the doctor on call and arrangements can be made to see the patient that day. It is important for our surgeon to speak with the referring physician to learn more about the case, so please understand that this needs to be a physician to physician call.

Surgical Consults: Please call our office at 765.521.1217 to make a referral. Your office staff may ask for a specific physician or the first available physician.

EGD/Colonoscopy: Call Ambulatory Care at 765.521.1310 to schedule a colonoscopy or EGD. Based on the patient's medical history the Ambulatory Care nurse will determine if your patient needs to see the surgeon prior to the procedure. The surgeon will want to see your patient prior to the procedure if one of these high risk conditions is present:

Hx of Lung Disease	Insulin Dependent
Hx of Heart Disease	Diabetic
Hx of Kidney Disease	Diabetic with Blood
Previous Colectomy	Sugar >200
Taking Coumadin/Blood thinner	Use home oxygen
